

ENERGY CONSERVATION DAY

Energy saved is Energy conserved. Energy generated using fossil fuels typically pollute the environment in a number of ways and costs about Rs.1, 50,000 cores per year .To reduce the demand, to save money and to protect environment in a better way there is a need for us to switchover to Alternate Renewable Energy Sources like Solar, Wind, Biofuels, Biogas, Tidal, Hydro, and Geothermal etc. The conservation of energy can improve the possibility of energy fulfilment. So to create awareness on energy conservation & efficiency among students the Department of Physics celebrates National Energy Conservation Day i.e. on 14th December every year by conducting inter -collegiate academic competitions in the events like Poster making ,Power Point Presentation, Quiz, Debate , Dumb Charades & Essay Writing etc.
